SRI CHANDAN VURA

Bangalore, India • +91 8328014070 • srichandanvura@gmail.com • linkedin.com/in/chandanvura • github.com/chandanvura

PROFESSIONAL SUMMARY

Backend engineer with about 1.5 years of professional experience, including one year at Sony India Software Centre working on the Java services behind PS4 and PS5 platform workflows. Moved 10+ microservices from Java 8 to Java 21 and Spring Boot 3, helped keep their build and deployment pipelines running on AWS EKS, and built PayGuard, a personal project on safe payment retries and reconciliation.

TECHNICAL SKILLS

Languages: Java (8 / 17 / 21), SQL (PostgreSQL), Python, Bash, TypeScript / JavaScript
Backend & Architecture: Spring Boot 3, Spring Data JPA, Microservices Architecture, REST APIs, Jersey, Hibernate, Flyway, Maven
Cloud & Infrastructure: AWS (EKS, ECR, S3, IAM, VPC), Docker, Kubernetes, Terraform, Helm
CI/CD & DevOps: CI/CD Pipelines, Jenkins (Core / Pipelines), GitHub Actions, Argo CD, GitOps, Git
Testing & Observability: JUnit 5, Mockito, SonarQube, SCANOSS, Prometheus, Grafana, Loki, Micrometer, Skuba (Kubernetes ops tooling), Linux, Concurrency

PROFESSIONAL EXPERIENCE

Software Engineer | Sony India Software Centre

Bengaluru, India | Mar 2025 – Mar 2026 • Internal Java backend services powering PS4 & PS5 platform workflows

- **Java 21 migration:** Moved 10+ production microservices and 3 shared libraries from Java 8 to Java 21 and Spring Boot 3. Handled javax-to-jakarta namespace migration and dependency updates.
- **Performance checks:** Evaluated latency and memory footprints before and after upgrades; tuned JVM garbage collection parameters to optimize console backend responsiveness.
- **Testing and security:** Added automated unit and integration tests with JUnit 5 and Mockito; integrated SCANOSS security scans into CI/CD pipelines to prevent vulnerable dependencies and license conflicts.
- **Build pipelines:** Migrated build workloads from One Jenkins to Core Jenkins for Java 21 toolchain support; automated multi-module Maven builds, container packaging, and image publication to AWS ECR.
- **Monitoring & Health:** Supported containerized microservices on AWS EKS; observed telemetry metrics, structured logs, and service health using Skuba, Prometheus, and Grafana.
- **Releases & Governance:** Executed production deployments through CAB approval gates and automated AutoCD pipelines with robust post-deployment verification testing.

Software Engineer | Quantum Wave

Remote | Dec 2023 – Jun 2024 • Backend service integration, API consumption, and full-stack web application development

- **API work:** Built backend REST endpoints with clear request and response contracts, strict input validation, and token-based authentication.
- **Frontend integration:** Developed Angular/TypeScript client layer communicating with services using RxJS observables, HTTP interceptors, and unified error handling.
- **Faster data loading:** Reduced redundant network calls and payload transfer sizes by implementing server-side pagination, structured filtering, and caching layers.
- **Team workflow:** Collaborated across an Agile development lifecycle, conducting schema reviews, writing comprehensive unit tests, and adhering to Git version control workflows.

PROJECTS

PayGuard: Distributed Payment Reliability & Reconciliation Platform | github.com/chandanvura/PayGuard | Live Demo

Tech Stack: Java 21, Spring Boot 3, PostgreSQL 17, Redis, Docker, Kubernetes, Prometheus, Grafana

- **Safe payment retries:** Engineered payment APIs that enforce exact once execution across retries using SHA-256 request fingerprinting, Redis distributed locks, and PostgreSQL unique constraints.
- **Reconciliation worker:** Implemented scheduled reconciliation workers that detect payments in UNKNOWN or in-flight states following network drops or webhook timeouts, transitioning them to resolved terminal states.
- **Data consistency:** Governed schema evolution using Flyway on PostgreSQL 17; enforced optimistic concurrency controls, specialized indexes, and immutable audit logs.
- **Deployment & Observability:** Packaged services into containers, deployed via Kubernetes Helm charts, and configured Prometheus, Grafana, and Micrometer alerts for error spikes and P99 latency thresholds.

EDUCATION

Bachelor of Technology – Computer Science & Engineering | Parul University, Vadodara, Gujarat 2020 – 2024

CERTIFICATIONS & TRAINING

The Linux Foundation: LFS158: Introduction to Kubernetes • LFS169: Introduction to GitOps • LFEL1009: OpenTofu
Industry Certifications: Java Programming (Infosys Springboard) • IBM Cybersecurity Analyst (Coursera)
